

Join our SWARCO Bergauer higher-level control systems team for traffic and infrastructure as

Backend / Java Engineer (m/w)

Location: Baden – Dättwil / Canton Aargau / Switzerland | Full-time

Your Challenge

- You implement sophisticated business logic modules in Java and write module- and integration tests independently
- You integrate new protocols and standards into our SCADA system and implement the required interfaces
- You will work closely with the project managers and with colleagues from the backend team
- You will take the responsibility in exciting projects and be in direct contact with the international development team of the SWARCO Group

Your Profile

- You are a computer scientist FH / HF
- You have good knowledge and practical experience in the areas of: JAVA (8,11), OSGI, MAVEN, MariaDB / MySQL
- CI/CD tools like Jenkins, Nexus are not foreign concepts to you. Eclipse IDE is not a stellar constellation for you
- You know your way around Docker, have heard of K8S (HELM) and move around Windows and Linux with confidence
- Dealing with distributed systems (microservices) which communicate via RabbitMQ (AMQP) or Kafka (MQTT) is familiar to you
- You have good German and English skills

Your Benefit

- Interesting and varied tasks in a growing industry environment
- Opportunities to shape the future of the transport area
- Collegial working environment and open company culture with contact to the international SWARCO team
- Wide scope for creativity and responsibility
- An employer who values your input
- Further training that promotes and challenges your personal strengths

The future of mobility begins today. Yours too?

Join SWARCO. We are looking forward to receiving your online application:
