

THE TACTILE MARKING SYSTEM EUROTAC

Safety creates quality of life. Accessible and inclusive orientation is a basic social need. EUROTAC helps visually impaired people in particular to find their way in public spaces.

EUROTAC guidance systems offer optimal orientation. They act on both a tactile and visual level, guiding people safely and reliably along their way. The result is significantly better quality of life and mobility.

MULTI-SENSORY ORIENTATION

RELIABILITY CREATES TRUST

- Extremely resilient and resistant
- Certified slip-resistant material surface
- Resistant to frost, snow and salt
- Quick and easy to apply
- Very good price-to-performance ratio

SENSORY AND VISUAL CONTRAST

- White and coloured plates for better detectability
- Tactile ground elements for low-texture paving and flooring (The plates can form various patterns indicating direction, drawing attention or marking boarding areas, etc.)
- Borders along the sides of low-contrast paving and flooring

EUROTAC APPLICATION GUIDE

1. Cleaning the surface

The surface must be dry, clean and free of grease and oil.

2. Pre-marking and taping

Mark the outline with tape.

3. Applying special adhesive

Apply the special adhesive in an even layer.

4. Laying the plates

Lay the plates on the fresh layer of special adhesive and gently press them into position.

TIP

We recommend using a pressure roller to achieve a perfect bond with no bubbles between the plates and the surface (special adhesive).

5. Removing the masking tape

TIP

Remove the tape before the special adhesive is cured.
