

Handheld.Gate 'Handheld Monitor' 'Soft Pinpad'

Energize your ticket checking! Mobile ticket check – mobile management – smart remote control

Handheld.Gate 'Handheld Monitor' – staying flexible

- **All systems go:** Handheld.Gate 'Handheld Monitor' makes the data mobile. You will see what's happening, even on the move by looking at the traffic light colors indicating the state of the components.
- **Information at its best:** All information live at the Handheld.Gate 'Handheld Monitor': Visitors on ground, in single areas, detailed info about VIP tickets, double usages, etc.

Handheld.Gate 'Handheld Monitor' – seeing, knowing, reacting

- **Monitoring and controlling:** Your Handheld will become a mobile monitoring and controlling station when using the Handheld.Gate 'Handheld Monitor'. Depending on the user rights you will monitor during passive mode or react in active mode: block turnstiles, release them, change passage direction, allow single turnstile releases or deny them etc.

Handheld.Gate 'Soft Pinpad' – more control

- **Take over the control on the fly:** Overrule the decision of single checkpoints quickly and security using control commands from the Handheld: tickets with bad printing, re-entry after exit, overrule biometric decisions, enter ticket numbers and much more.

Handheld.Gate 'Soft Pinpad' – your remote control

- **Intervene directly at the checkpoint:** The Handheld.Gate 'Soft Pinpad' mobile controls single checkpoints. You can change the operating mode, adapt the light signals, open the turnstiles and much more. But: only the person with the authorization is allowed to interact.
