

RUMBLER® is an innovative traffic safety product by Swarco Industries Inc. It is designed as a traffic calming, speed reduction and driver alert system combining the following safety features in just one product:

- audible warning
 - controlled vibratory warning
 - visual daytime warning
 - visual night-time warning
 - visual reflective wet-night warning
 - for temporary or permanent applications (asphalt or concrete surfaces)
 - easy and quick to install without requiring specialized equipment
 - flexible & conformable construction eliminates breakage experienced with ceramics and rigid plastics.
 - available in reflective and non-reflective versions (white, yellow and non-reflective black)

RUMBLER® is an ideal solution to effectively influence driver behavior where speed reduction, advance notice of upcoming construction zones or potentially dangerous traffic conditions (intersections, school zones, railroad crossings, etc.) need to be emphasized.

RUMBLER® preformed rumble strips are excellent traffic safety devices for bridge deck channelization. The highly reflective raised surface provides superior visibility and distinct audible warning to guide the motorist away from dangerous barrier wall intrusions. Studies indicate benefit / cost ratios of 66:1 from the use of rumble strips as a road treatment for reducing "run off the road accidents"!

Can you afford not to use them?

Recommended Spacing (based on 6" wide rumble strip):
 30 to 40 mph – 12 inches; 40 to 55 mph – 24 inches; 55+ mph - 48 inches
