

License Plate Recognition Solution

Whether for airports, shopping centers or in the city: Automatic License Plate Recognition ensures efficient vehicle access management. With the SKIDATA complete package you can secure advice, integration and service from a single source as well as increases in efficiency, comfort and security.

- Efficient thanks to increased throughput and cost savings due to reduced ticketing and handling
- Maximum customer comfort through no-stop entry and exit
- Effective prevention of fraud for free parking and tickets
- Valuable information for targeted marketing activities

Use cases for a variety of business requirements

Efficiency, that pays off

The freeflow access increases throughput at the entrances and exits. Completely replacing tickets with the use of the license plate number eliminates costs for data carriers and their handling.

Your benefit: reduce customer waiting times; eliminate the ordering, delivery and filling of tickets to save you time and money

Comfort, that convinces

Without the usual ticket handling at the entrance and exits, there is no need to roll down the window. Your customers will appreciate that - especially in the cold season.

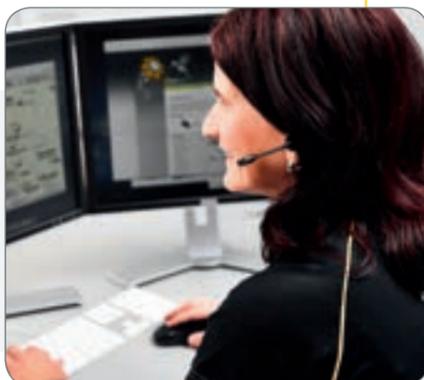

Your benefit: contactless entry and exit for optimal customer comfort

Security, that works

The license plate number is associated with the ticket at the time of issue. If this data does not match when leaving, exiting is not permitted. In the event of a declared ticket loss (real or fraudulent), the time of entry can be determined and therefore the correct parking duration can be calculated.

Your benefit: prevent repeated use of limited free parking or waiting periods and deter car theft; effective prevention against ticket abuse

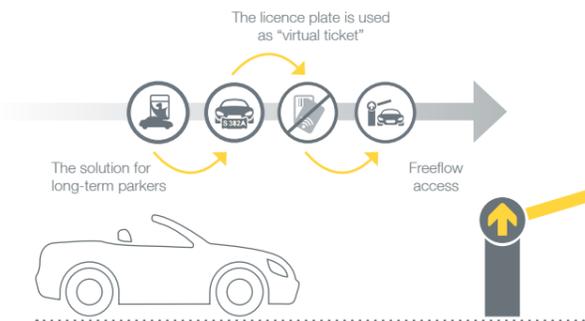

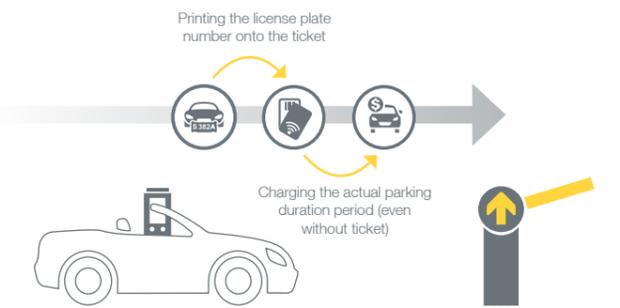

Promotions, that hit the mark

With license plate recognition, you can collect valuable information about your customers (as allowed by applicable laws), which you can then use to effectively guide your marketing activities.

Your benefit: customized, target group-specific communication and focused geo-marketing

1. Print and Check - Additional security for operators

Combine access management and payment control: By printing the license plate number onto the ticket it becomes clearly assigned to that particular vehicle, preventing the passing of tickets between customers. In addition, lost or unreadable tickets can be invalidated and replaced with a duplicate, allowing the actual parking duration period to be charged to the customer.

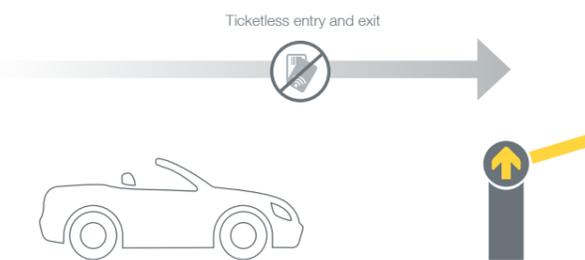

2. Contract parkers – Green light for a comfortable customer experience

Turn the license plate into a "virtual ticket" and make the access permission for long-term parkers immediately active. Your registered customers will enjoy freeflow access – lifting their spirits and at the same time increasing the throughput of vehicles at entrances and exits. With digital ticketing you save money on both paper and RFID tickets, and even make the environment happy.

3. Convenient Exit - Cleverly combined for customer and operator

Operational efficiency and comfort for the customer go hand in hand: After your customer has paid for parking, he can easily exit without further ticket handling. The license plate acts as a payment reference that is checked at the exit to automatically give a 'green light' for departure. You benefit from a reliable payment control, and your customers can exit your parking facility comfortably.

4. Ticketless - Maximum comfort for everyone

Offer all of your customers – not just registered contract holders – the benefits of convenient, no-stop entry and exit, without the use of a ticket. The ideal solution if you want to secure parking spaces for your customers as well as to manage and profit from the remaining available spaces.

Your benefits at a glance

Everything from a single source

With the SKIDATA package, you get a solution that offers you maximum benefits like consulting, integrations and servicing. In addition, you keep a flexible operation with interfaces that enable third-party system integrations.

Central user administration

Another advantage is a central user administration for all systems. By using single sign-on (SSO), users can access services easily and conveniently. From administration and control to monitoring and maintenance, you centrally manage authorizations for modules and thus create transparency for user activities.

Easy integration

Because Parking.Logic and PlateTech.Logic can run on the same server, you benefit from reduced maintenance and operational costs. SKIDATA Plate.Gate cameras take your parking management to the next level.

An investment in the future

With SKIDATA you are always on the safe side when it comes to quality, safety and efficiency. You benefit from the know-how of the world market leader with over 40 years of experience, who stands for reliability and innovation. You have the guarantee that your products are always up to date.

Vehicle access management

Parking.Logic is at the heart of SKIDATA's parking management system and the center of all your parking facilities - from management and administration to monitoring and maintenance.

PlateTech.Logic records license plate numbers as well as the associated images and data relevant to each entry and exit* - this provides the foundation for useful reports that you can access anytime, anywhere.

* Image storage is subject to country-specific regulations

License plate processing

License plate recognition

The camera, Plate.Gate, uses infrared sensors to provide dependable identification of license plates both day and night. Neural-based OCR (Optical Character Recognition) ensures that the vehicle is automatically identified via the license plate. In addition to floor installation (including housing), it can also be mounted on a mast or wall.
