Freeflow Solution: Smooth touchless parking and payment

It's the way to go in terms of innovation, profitability, security, scalability and customer convenience.

Utmost convenience for your customers

Your customers benefit from ultimate convenience when entering your car park. The seamless entry and exit using the Freeflow Solution gives your guests the feeling of a warm welcome: This future-oriented mobility concept provides the unrestricted freedom of hassle-free entry, payment and exit. The resulting high convenience helps to boost customer satisfaction along with your brand image and your profile as an innovative provider.

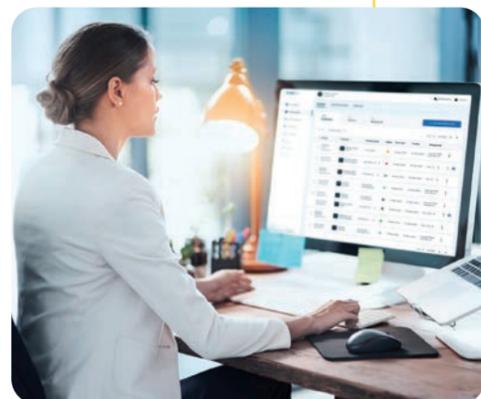

Upgrade your facility with the mobility concept of the future by offering seamless entry and exit points. Drivers enjoy the unrestricted freedom of movement.

Easy integration & full flexibility

Any existing assets in your facility can be continued to operate. You can flexibly add-on technical features to adapt the system to your needs. All options can be easily integrated, as e. g. license plate recognition, online payment solutions or single-space monitoring and special entrance features for nested car park spaces. On-screen displays at the entrance via Dashboard.Gate and automatic payment machines complete the eco-system of the Freeflow Solution from SKIDATA.

SKIDATA hosts the sweb platform, where your organization with all its parking facilities is registered with a client ("tenant") account. All your sweb services are bundled here for centralized management. Additionally, the sweb platform also functions as a hub for integrating external partners along the entire process chain.

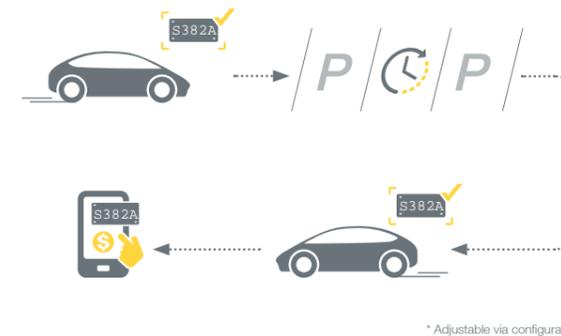

Reduced Operational Efforts

Barrierless access solutions help you to reduce your operational efforts and to increase your resources for strategic planning and customer support. With the Freeflow Solution, you turn anonymous parkers into registered subscribers. You benefit from clearly structured on-screen parking status visualization, at-a-glance payment overviews with the possibility to analyze transaction data and a high level of system and business transparency. The data storage is completely GDPR-compliant.

Collect Payment Your Way

1. On-site | Pay-by-Plate at the skiosk® vending machine

Your customers pay directly on site by entering the license plate number at the skiosk payment machine. A summary of the payment process is displayed and the customer can leave the car park.

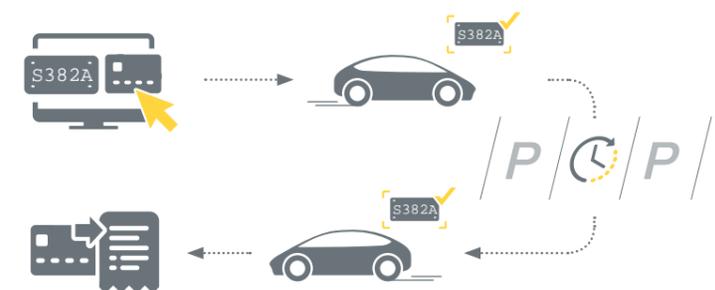

2. Online | PayLater

Your customers pay from the comfort of their home within 48* hours after having left the parking: they simply go to your website, enter their license plate number and easily pay by a few clicks. Integrate a subscription link in your website and in your marketing communication to encourage your short-term parkers to register as recurring parkers.

3. Online | Pay-Per-Use

Your recurring customers will appreciate the ease of registered payment. The payment is automatically debited after each exit and your customers are informed about the successful payment process (including the amount) by email.

Freeflow Solution

Feature overview and products

SKIDATA software package

With the Freeflow Solution you can start to make your parking facility ready for the future – at once. The software package is ready-to-use.

It contains all important components, e. g. sweb Mobile Pay that makes paying easier than ever before. No cash, no cards, no long queues at the APM: Customers simply complete the payment process online via their smartphone.

Parking management

Parking.Logic is the core of SKIDATA's parking management system and the central management and administration tool for all your parking facilities - for resource planning, monitoring and maintenance topics.

License plate processing

PlateTech.Logic records license plate numbers as well as the associated images and data relevant to each entry and exit* - this provides the basis for useful reports that you can evaluate from any device, anytime, anywhere.

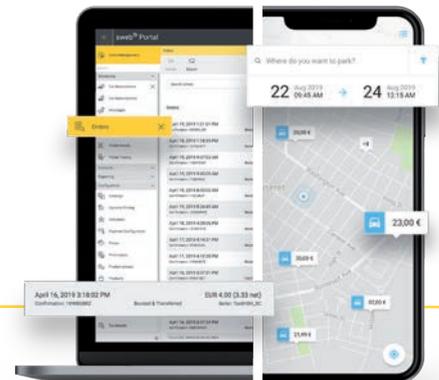

* Image storage is subject to country-specific regulations

License plate recognition

The Plate.Gate camera uses infrared sensors to ensure reliable identification of license plates both during day and night. Neural-based OCR (Optical Character Recognition) ensures that the vehicle is automatically identified via its license plate. The Plate.Gate camera can be installed on the floor (including housing) as well as mounted on a post or on the wall.

sweb® eCom

sweb® eCom | Administration

All parking transactions operated with the Freeflow Solution can be easily administered and analyzed by the operator. This ensures that all payment procedures are recorded either immediately at the car park, within 48* hours online or, where applicable, by means of an enforcement procedure. Predefined and clear graphical dashboards are also available.

sweb® eCom | Freeflow PayLater

The sweb eCom PayLater portal can be easily integrated into your website and can also be operated easily using any mobile device. Your short-term parkers can pay securely and conveniently online at any time within 48* hours after having left the parking by mobile devices or from their desktop. They simply enter the license plate number used for the parking process and their credit card details at the portal.

In addition, your customers have the option to register themselves on the portal for the "PayLater" payment option in order to pay even more conveniently.

sweb® eCom | Pay-Per-Use

Registered customers can choose to have automatically billed the parking fees via their credit card immediately after leaving the car park. They will receive an electronic receipt by email. Registered customers also have access to a self-service area where they can conveniently manage their personal data themselves – e. g. changing the license plate number to be registered or a different credit card number.

sweb® eCom | Freeflow Enforcement

All parking operations still marked as "open" after 48* hours can be extended or exported to your enforcement service provider so they can collect the open parking fees. An integrated reporting system keeps you informed about all details.

* Depending on configuration
