sweb.Validate

Use validations for profitable business partnerships with nearby retailers, offices and hotels. The web-based SKIDATA sweb.Validate Service lets you take full control of the sale and administration of validations – digitally and efficiently. As a result, you can optimize the utilization of your parking facility and boost your bottom line.

sweb.Validate: digital entertainment management, designed by, with and for parking professionals

Fully web-based service

All you need to start issuing validations is a computer with Internet access. Configuration, administration and reporting are only a mouse click away.

Your benefit: No need for hardware (like stamps or hole punches) and therefore no maintenance; eliminates the opex costs of producing physical tickets.

No paper tickets, no paper waste

Digital ticketing does away with the costs and waste caused by paper-based discount and validation tickets.

Your benefit: No extra purchase costs, and a clean parking environment

Full cost control

You and your business partners can easily verify and trace the number of validations and who they were issued to. This helps to eliminate theft and fraud.

Your benefit: No discount fraud, no risk of losing money, thanks to full transparency.
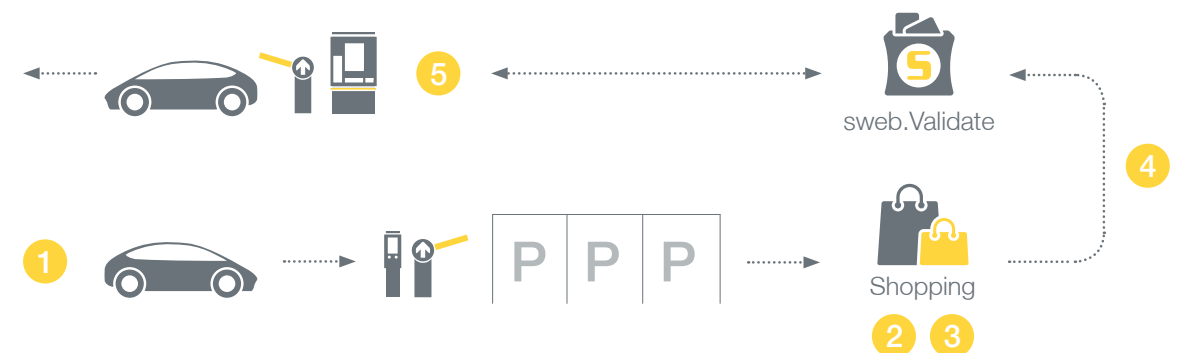

Practical overview, any time

Pre-payment or deferral – your business partners purchase validation credits and pay in advance or by deferred payment. The current balance and cost details are shown in the Web Portal.

Your benefit: You and your business partners are always up to date on your ongoing business.

Multiple parking facilities, one technical basis

sweb.Validate enables the integration of multiple parking facilities with the help of SKIDATA technology (Parking.Logic), even across different providers.

Your benefit: Scalable use from single-facility arrangements to multi-facility operations, based on a common SKIDATA hosted environment.

Easy language selection

Your staff can flexibly choose their preferred system language. There is a variety of language packages to choose from.

Your benefit: Different users can each work in their preferred language while sharing the same computer.

User-friendly

Multiple discounts may be granted to the same short-term ticket. Upon payment, the cumulated discount is automatically applied to the parking fee. No need for follow-up validation cards or delays caused by smudged validation markings.

Your benefit: Satisfied customers, thanks to easy handling; reduced workload for your call center and support staff; simplified parking business and reduced operative expenses.

Here's how it works:

Whether as an incentive for shopping center customers, or as a parking permit for delivery staff or visitors to your industrial estate, users enjoy convenient, ticketless parking:

1 The customer takes a parking ticket at the entrance gate.

2 They have the ticket validated in a shop via a web browser, terminal or app.

3 Business partners purchase parking credits from the parking operator and pay in advance or by deferred payment.

4 The electronic validation is sent to the local parking facility via the 'Cloud'.

5 Discounts from validations are applied to the outstanding parking fee upon payment.

3 validation options with sweb.Validate

Web site: using any common web browser (e.g., Internet Explorer, Google Chrome or Mozilla Firefox)
- Log in with your user name and password.
- Enter the number of the short-term parking ticket or scan the barcode using a hand-held scanner.
- Select the validation type and apply it.

Self-service kiosk[1]: Ideal for facilities with high customer volumes, e.g., retailers, event venues, restaurants or theaters.
- Scan the short-term parking ticket with a web-enabled barcode scanner – that's all!

iOS Mobile App[2] for iPhone or iPod or Android Mobile App[2]:
- Install the app.
- Scan the short-term ticket.
- Select the validation type and apply it.
