

TEMPORARY PAVEMENT MARKING TAPES

MARKING YOUR WAY SAFELY

Temporary pavement markings are an important component in improving construction zone safety for road users. SWARCO Road Marking Systems offer various temporary pavement markings that deliver effective ways to designate traffic and guide motorists from point A to point B. Temporary pavement marking tapes are one of the ways SWARCO provides critical information to drivers, thus making construction zones safer.

SWARCO Road Marking Systems temporary pavement marking tapes are cold-applied, preformed materials supplied in continuous rolls of various lengths and widths. Temporary pavement marking tapes have an advantage over sprayed or extruded materials in that they do not require expensive application equipment or experienced operators to install, and require no drying or curing time. Additionally, they are designed for clean, easy removal without damaging the pavement, reducing labor costs and eliminating the need for surface repair after lane changes or project completion.

Clear guidance through active work zones is possible with highly visible temporary pavement marking tapes.

Visa-Line / FOL Temporary Pavement Marking Tapes are a highly economical solution when short-term temporary pavement markings are needed for construction or road repair. The pre-applied pressure sensitive adhesive on the conformable aluminum backing provides excellent bonding to most roadway surfaces. Just place on the roadway and tamp with your foot or a vehicle tire is all that is needed to apply to surface. Removal is just as easy - simply pull up the tape, leaving a clean surface underneath.

Visa-Line / FOL Pavement Marking Tapes is available in two grades. Experience has proven that the highly reflective Engineer Grade and Construction Grade tapes are generally more durable than conventional high quality temporary paint, and will show no appreciable fading, lifting, shrinking or chipping when applied according to SWARCO's instructions.

Construction Grade / FOL 200 Series - The most economical temporary tape and is used more often in remote locations when the speed of repairs or assignment of marking crews is impractical. They offer a cost-effective level of reflectivity and durability.

Engineer Grade / FOL 300 Series - Highly reflective with a thicker matrix and binder system for greater durability and larger and brighter beads for higher reflectivity, and used for longer term temporary applications where higher reflectivity is desired.

BENEFITS:

1. Superior Reflectivity

Visa-Line / FOL Pavement Marking Tapes safely lead drivers with more than 3x the retroreflectivity of temporary paint.

2. Preview Time

Higher visibility increases driver reaction and response time in unpredictable construction zones.

3. Conforms to Surface

Tapes readily conform to a vast variety of pavement surfaces, and molds to your needs.

4. Stays in Place

Superior adhesive eliminates stray tape, minimizing replacement costs and limiting liability.

5. Economical

Visa-Line / FOL Pavement Marking Tapes combine retroreflectivity, durability, and economy to provide the lowest cost to benefit ratio available.
